Objective

I am looking for a full-time software developer position either as a remote worker or onsite in Victoria, BC. I'm a seasoned full-stack web developer that leans toward frontend engineering, but has experience designing, implementing, and deploying production systems. My greatest strength is React, and my languages of choice are Javascript and Elixir. I have experience in Ruby, C/C++, Python, and I'm a HTML/CSS veteran. I'm a few courses away from completing my undergraduate in Computer Science & Mathematics degree at UVic. Previously I studied Mathematics at Thompson Rivers University.

Work History

Covault Technologies, Inc.

Co-op Marketing Software Startup in Victoria, BC

April 2018 - Present

Lead Developer

- Hired as a frontend developer, and lead the React app development
- Inherited the role of lead developer after implementing several backend features
- In charge of the production app, three codebases, a junior dev, and product development

Canary Print & Design

Vancouver Island print & design company

May 2018 - December 2018
